SUMMARY

Recent Information Technology graduate with two years of hands-on experience building and shipping real web applications. I take projects from initial architecture all the way to deployment, handling everything from database design and security to CI/CD and production monitoring. I work across the full stack, write clean and maintainable code, and treat security as a priority from the start rather than an afterthought. I pick things up quickly, communicate well, and I am genuinely excited to bring that same drive and ownership into a professional team environment.

WORK EXPERIENCE

Department of Labor and Employment

Feb – May 2026

IT Intern • Regional Office VI

- Executed network technician tasks including LAN cabling and SSID configuration, optimizing network functionality across the office.
- Provided hardware support by diagnosing and repairing Epson printing systems, enhancing operational efficiency.
- Facilitated data entry and reporting by structuring Excel encoding from verbal and written input, ensuring accuracy in documentation.
- Coordinated IT asset management, tracking inventory lifecycle, serial numbers, and specifications for improved resource allocation.

PROJECTS

Portfolio Website

December - 2025

Full-Stack Developer • <https://cjblack-dev-minimalistic-portfolio.vercel.app>

- Built and deployed a full-stack portfolio website from scratch with *authentication, database integration, and security protection*.
- Implemented a *multi-method login system* supporting social login, magic link, and email and password authentication with email verification and password reset.
- Developed a community Feedback Wall where authenticated users can post, edit, and delete feedback, with role-based permissions restricting certain actions to authors and admins only.
- Built a Heart Reaction system that allows users to toggle reactions on content, preventing duplicate interactions through database-level constraints.
- Secured all public-facing forms and endpoints against bots, spam, and malicious traffic with rate limiting and input validation.
- Integrated a contact form that *delivers inquiries directly to Gmail*, with real-time success feedback after submission.
- Monitored application health in production with automated email alerts triggered on runtime errors to maintain site stability.
- Deployed with a *CI/CD pipeline* ensuring every code update is automatically built and shipped to production.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, R, AWS (familiar)

Front-End: HTML, CSS, React.js, Next.js, Tailwind, React Native (Expo)

Back-End: Node.js, Express, MongoDB, PostgreSQL, Next.js – Custom Server

DevOps & Tools: Git, GitHub, CI/CD, Vercel, Prisma, Arcjet, APIs, Prompt Engineering

Networking: Cisco Packet Tracer, VLAN, Routing, Switching, Subnetting, IP Addressing

IT Support: LAN cabling, SSID configuration, hardware diagnostics, IT asset management, Excel

EDUCATION

Bachelor of Science in Information Technology

2022 – 2026

Western Institute of Technology, Iloilo City

- *Academic Scholarship • June 14, 2024 (2nd Year – 2nd Semester)*
- *2nd Runner Up – Networking Competition TECHLYMPICS 2025*
